Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3, and 6-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Jung et al. (2004/0081434).

Regarding claim 1, Jung discloses a video playback device (Figure 9) showing a storing step (optical disc), a file system information-accessing step (READER), calculating step (note position data in Figure 12, "200, 380"), a DBCS accessing step (DOWNLOAD FONT DATA buffer), and an updating step (RENDERER). It should be noted that the RENDERER calculates the SP (sub picture or OSD) display area based on the position data.

Regarding claim 2, see optical disc in Figure 9.

Regarding claim 3, the disc reader in Jung inherently includes the calculating step and the capturing step as claimed.

Regarding claim 6, the MPEG files in DVD discs inherently include MP3 files.

Regarding claim 7, in addition of rejection above, Jung further shows a storage medium (optical disc), an on-screen display (OSD) buffer memory (TEXT FILE), a

memory (DOWNLOAD FONT DATA buffer), a processor (READER), and an on-screen display unit (RENDERER).

Regarding claim 8, see paragraph 0123.

Regarding claim 9, see paragraph 0138. A different position of the subtitle is the same as the offset character as claimed.

Regarding claim 10, see Figure 9.

Regarding claim 11, the disc reader (Figure 9) and the disc writer (Figure 23) inherently includes a detector module. The reader and writer are capable to read and write the disc randomly, respectively.

Regarding claim 12, see rejection to claim 6.

Allowable Subject Matter

3. Claims 4 and 5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Chung et al. (2003/0086690) show a DBCS memory.

Ernst (5,005,137) shows two-byte character optimizer.

Takeuchi (6,879,775) shows an OSD device.

Tournier (6,630,966) shows an OSD RAM.
